

Technical Data

Compression Fittings > Green Line

DESCRIPTION

Application											
• Compression fitting for PE pipes											
Specifics											
• Maximum working pressure: 16 bar (\varnothing 90/110 reduced maximum pressure)											agriculture
• Resistant to chemical products normally used in											• UV high-resistance body and rings • O-ring hydraulic seal
Features											
• Conical tightening of high resistance thanks to an internal ring of conical tapling											• Different models and diameters • It does not affect water taste and smell
Materials											
• UV resistant polypropylene											• Natural rubber o-ring

PN10 fittings

Bo. = box - B. = bag

> Assembly Instructions

Important

- The end of the tube must be cleaned of any residues
- From diameter 20 to 40 it is possible to screw and unscrew the ring nut manually
- If the ring nut is not completely fixed, there may be leaks or the pressure may detach the hose from the fitting
- In male fittings, the thread must be covered with PTFE tape

Green Line PN10 Ø20 ÷ Ø63

1. Remove completely the threaded ring nut and sealing gasket from the fitting body.
2. The sealing gasket and the threaded ring nut (green color) must be inserted on the pipe.
3. Insert the pipe into the fitting as far as it will go. Make sure the tube passes through the O-ring.
4. Push the seal to its original position.
5. Press the threaded ring and screw it onto the fitting.
